IPL SKIN REJUVENATION

Brown age spots and broken red capillaries can give your face an uneven, rough textured complexion, showing signs of age and fatigue. Fortunately, Photo rejuvenation represents one of the greatest advances in the treatment of ageing skin. Using Photo rejuvenation, light energy penetrates the skin effectively reducing both red and brown pigments. We use longer wave lengths of light to also stimulate new collagen formation so that the face becomes more luminous rather than dull and spotted. Photo rejuvenation provides a noticeable improvement in the overall quality and tone of the face, resulting in the appearance of a more youthful and even toned skin.

- Pigmentation
- Facial Veins
- Skin Rejuvenation

We recommend clients undergo 3 to 5 IPL treatments and a maintenance treatment every 6-12 months depending on your lifestyle.
